Figure 1: Areas of the brain affected by depression. Amygdala: The amygdala is part of the limbic system, a group of structures deep in the brain that's associated with emotions such as anger, pleasure, sorrow, fear, and sexual arousal. The amygdala is activated when a person recalls emotionally charged memories, such as a frightening situation.

What causes depression? - Harvard Health

ADHD and Dopamine Deficiency. The underlying cause of ADHD is still unknown. But it is widely accepted that the root cause of ADHD is probably an abnormality in dopamine function. This seems logical since dopamine is critical for maintaining focus. Most ADHD medications are based on the "dopamine deficiency" theory.
