IADC Codes make it easier for drillers to describe what kind of rock bit they are looking for to the supplier. Bit Brokers International follows the IADC bit classification system in which the first three digits classify the bit according to the formation it is designed to drill and the bearing/seal design used.

The IADC classification system, developed by the International Association of Drilling Contractors has been the representative voice of drillers worldwide since 1940. This system has enabled drillers worldwide to exchange information using standard nomenclature and dull grading methods for PDC drill bits and tricones.

An eight point dull grading system has been established by the IADC to enable drillers and bit manufacturers to evaluate the performance of a drill bit. This eight point system is described below and is used on both tricones and fixed cutter bits but does not apply to drag bits: 1.

IADC CODES - Bit Brokers International

Drill collars, when used without stabilization, tended to buckle and cause unwanted deviation and poor hole quality. Multiple stabilizers were positioned to increase the stiffness or to promote the natural bending of the drill collars, thereby pointing the drill bit or applying a side force to encourage the wellbore in a specific trajectory.
