We will study the inheritance of genes in humans, using pedigree analysis. Finally, we will cover how genetics can be used to study biochemistry, and how a collection of mutants with the same phenotype can be used to study a biochemical pathway. During this unit, you will be introduced to common genetic terms and

Cells are the basic unit of life. Genes are the basic units for passing traits from parent to offspring. Evolution by natural selection is the process that has led to the great diversity of species on Earth.

Living things maintain the environment within their cells and bodies. Living things have the ability to acquire and transform energy.
