Review And Reinforcement Chemical Reactions

Deep reinforcement learning was employed to optimize chemical reactions. Our model iteratively records the results of a chemical reaction and chooses new experimental conditions to improve the reaction outcome. This model outperformed a state-of-the-art blackbox optimization algorithm by using 71% fewer steps on both simulations and real reactions.

Review And Reinforcement Chemical Reactions Answer Key

Reinforcement learning is a class of machine learning algorithms, where the algorithm tries to reach some goal (in our case, maximizing the reaction yield) by performing actions step-by-step (in our case, performing chemical reactions with certain reaction parameters), and receives a reward each time it gets closer to its goal.
