The Endocrine, Head and Neck Pathology Service specializes in the evaluation of thyroid, parathyroid and adrenal glands, head and neck diseases including those of the oral cavity, larynx and pharynx, eye & ear, salivary glands, jaw & skull bones, and soft tissue. The team renders diagnoses on a little over 6000 cases each year.

Surgical Pathology < Pathology

The craniofacial bones, trachea, and larynx are susceptible to many reactive, reparative, and neoplastic lesions seen in the rest of the axial and appendicular skeleton. However, many lesions common in the appendicular skeleton, such as giant cell tumor (GCT) and chondroblastoma, are rare in the head and neck.
