It's important to measure your organization's open source success not only by the health of your own open source projects but by its open source activity as a whole. This includes the health of the projects you rely on for product development and business operations, as well as ensuring your organization is legally compliant with the open source licenses of any projects you do use or release.

It's excellent that AWS, Instaclustr, and others can collaborate on this and other open source software, while also competing to best solve customer needs. Collaborative competition is what open source is all about. Open source is also about being able to run that software wherever the customer needs it.

### **The Instaclustr sign of open source success | AWS Open ...**

Open source started as a fringe activity, but has since become the center of software development. One of my favorite anecdotes from the early days of open source – when it wasn't yet even called open source, and was just “free software” – is around the Linux/Unix command [~}\$ BIFF that informs a user when a new email arrives.

### **Open Source: From Community to Commercialization ...**

The open-source-software movement is a movement that supports the use of open-source licenses for some or all software, a part of the broader notion of open collaboration. The open-source movement was started to spread the concept/idea of open-source software. Programmers who support the open-source-movement philosophy contribute to the open-source community by voluntarily writing and ...
